AI ENGINEER

Location: Danang Office

Employment Type: Full-time

DAC Data Technology Vietnam is a subsidiary of Hakuhodo DY One, a leader in Japan's online advertising industry.

Our main business content is Product Development & Data Science.

In product development, we have provided consulting and development across a wide range of advertising technologies.

In the data business, beyond analytics we integrate and enrich data to deliver actionable business value.

With an experienced engineering team, we consistently enhance our clients' operational efficiency and business outcomes.

JOB DESCRIPTION

- Design, build and operate AI agents that automate the development and operations of a large-scale advertising data platform in Japan.
- Develop LLM applications with Google ADK on Vertex AI (Gemini), connect tools through MCP, and coordinate multi-agent workflows (A2A).
- Build and improve RAG pipelines over documents, tickets and source code, covering ingestion, chunking, embedding, retrieval and reranking.
- Build evaluation datasets and automated evals, and monitor quality, latency and cost in production.
- Integrate agents with internal systems (BigQuery, GitHub, project management and chat tools), and build supporting services on Cloud Run (FastAPI).
- Work closely with the Web (PHP/Laravel) and Data (Python/BigQuery) teams to understand the existing codebases and drive an AI-driven development workflow.
- Collaborate with the Japan team, write design documents, and take part in code reviews and technical discussions.

REQUIREMENTS

Must have:

- Bachelor's degree in Computer Science, Information Technology or a related field, or equivalent practical experience.

- 3+ years of software development experience with Python as your main language (OOP, testing with pytest, dependency management).
- 1+ year of experience, or substantial hands-on projects, building LLM applications: prompt engineering, tool/function calling and structured output.
- Hands-on experience with RAG: embeddings, vector search and evaluating retrieval quality.
- Experience building REST APIs with FastAPI or Flask, plus Docker, Git/GitHub and CI/CD.
- Strong SQL skills.
- Ability to read and understand large existing codebases.
- Japanese or English: able to read and write technical documents and communicate at work through chat and email.

Nice to have:

- Experience with agent frameworks, especially Google ADK (or LangGraph, OpenAI Agents SDK, etc.), and with MCP or A2A.
- GCP experience: Vertex AI, Cloud Run, BigQuery, IAM and Secret Manager.
- Experience with LLM evaluation and observability in production.
- Data engineering experience: BigQuery, Treasure Data, Luigi or Airflow.
- PHP (Laravel/FuelPHP) or JavaScript (Vue.js).
- Daily use of AI coding assistants (Claude Code, Cursor, GitHub Copilot), ideally including building custom skills or MCP servers.
- Knowledge of the AdTech or DMP domain.

JOB DESCRIPTION

- Design, develop, and deploy AI-powered applications to solve real-world business problems.
- Develop AI applications using Large Language Models (LLMs), prompt engineering, RAG, and AI Agents.
- Integrate AI models and services into existing systems through APIs and backend services.
- Evaluate and optimize AI application performance, accuracy, and reliability.
- Collaborate with team members to deliver scalable and maintainable AI solutions.
- Write clean, well-documented code and participate in code reviews and technical discussions.

REQUIREMENTS

Must have:

- Bachelor's degree in Computer Science, Information Technology, or a related field.
- At least 3 years of relevant work experience.
- Strong proficiency in Python and object-oriented programming.
- Experience with LLMs, prompt engineering, and AI application development.
- Understanding of RAG, embeddings, and vector databases.
- Experience with RESTful APIs and backend frameworks such as FastAPI or Flask.
- Good problem-solving skills and ability to work in a team.

Nice to have:

- Experience with AI Agent frameworks
- Familiarity with cloud platforms (AWS, GCP, Azure) and Docker.
- Experience deploying and optimizing AI applications in production.
- Experience using AI coding assistants (GitHub Copilot, Claude Code, Cursor).

BENEFITS

Career path improvement

- Work, learn and develop with young and talented colleagues who are passionate and have big vision.
- Challenge yourself with new technologies and hot tech trends in the world.
- Participate in training programs on technical skills, soft skills and working methods.
- Be advised and share about career path and self-development.

Income

- Salary: Negotiable. Twice-a-year bonus.
- Probation: 100% salary.
- Performance review: Every January.
- Japanese, TOEIC allowance; Technical Certificates allowance.

Healthcare

- Premium healthcare for yourself and family members.
- Annual health checkups at prestigious hospitals.
- Women care regimen: Women physiological rest: 8 hours/month; Postpartum rest for female staff with children under 2-year-old: 1h/day.
- Premium health insurance (Bao Viet Tokio Marine) for yourself; and your family (for level Leader & Manager).

Company activities

- Annual company trips, various exciting events at the most luxurious hotels twice a year.
- Monthly allowance for team activities.
- Happy hours & daily fruits.
- Working time: 8:00 – 17:00 (Monday – Friday), Days Off: Saturday – Sunday and holidays, Tet in accordance with Vietnam Labor Law.
